FOR IMMEDIATE RELEASE

Prime Numbers Technology Expands TMC Partnership

Marlborough, MA – In alignment with their commitment to customer service excellence, Salt Lake City-based travel management company (TMC) Christopherson Business Travel announced the expansion of its decade-long partnership with Prime Numbers Technology, a leading provider of data analytics and reporting solutions. Building upon their successful collaboration, Christopherson is integrating Prime's new core reporting service into its comprehensive suite of offerings.

"The Prime team is excited to bring a new, more modern and flexible option to the industry for corporate travel reporting," said Prime President Mark Bresnahan. "No longer do TMCs require multiple platforms for managing corporate travel reporting and analytics."

Through streamlining processes and data sources, Christopherson aims to provide an enhanced reporting experience for their clients' evolving needs.

"Implementing this tool is proof of our commitment to offering our clients the most advanced technology to support their travel program," said Christopherson CEO Mike Cameron. "The implementation is already making a significant impact on our operations by streamlining processes and report consolidation. We're pleased to have received positive feedback on the intuitive interface design and level of product support. We're excited about the roll out of this powerful reporting tool as we continue to enhance our offerings for our clients."

Historically, Prime has been an advanced analytics and benchmarking platform, delivering powerful and actionable data analytics to optimize company travel spend, however, TMCs would use another platform for creating, viewing and scheduling standard client facing reports. With the introduction of new Prime modules like Core Reporting, Dashboard Reports and Scheduler, TMCs now have all the features they need to make Prime their complete and robust repository for global data consolidation, itinerary & spend reporting, real-time off-channel bookings reporting, carbon reporting & offsetting, travel & expense integration, predictive analytics, relevant benchmarking, air contract management and more. The recent advancements include the ability to ingest pre-trip itinerary data, in addition to the TMC back-office, expense and credit card data Prime already takes in. Pre-trip itinerary data (also called GDS data) allows companies to run arrival and departure manifests and locate travelers in real time.

###
