FOR IMMEDIATE RELEASE

Prime Numbers Technology and Agency Technology Partner to Deliver Real-Time, AI-Ready Travel Intelligence

MARLBOROUGH, MA – In a move to accelerate the delivery of predictive travel intelligence, Prime Numbers Technology has announced a strategic partnership with Agency Technology, a premier mid-office solution provider. This integration creates a seamless, real-time bridge between travel itinerary data and the Prime Analytics platform, providing the high-fidelity foundation required for modern, AI-driven travel management.

“This partnership is a critical step in our mission to transform fragmented data into a strategic asset,” said Mark Bresnahan, President of Prime Numbers Technology. “By integrating Agency Technology’s real-time itinerary data, we are unlocking full-trip visibility. This enables our analytics engine to move beyond retrospective reporting, empowering clients with real-time insights and optimization from pre-trip planning to post-trip ROI analysis.”

The live connection allows Travel Management Companies (TMCs) to automate complex workflows and provides instantaneous visibility into client activity, including arrival/departure manifests and geographical location.

“The needs of our customers are our top priority, and this partnership reflects that commitment,” stated Lee Brubaker, President of Agency Technology. “Feeding live itinerary data into the Prime Analytics platform gives our customers a powerful way to streamline and optimize their workflows.”

Already live with several global TMCs, this enhancement expands Prime’s ability to ingest and integrate pre-trip data with existing sources from back-office, expense, payment, and supplier direct systems, creating a comprehensive "AI-ready" data ecosystem.

About Prime Numbers Technology

Prime Numbers Technology delivers the industry’s most powerful analytics and benchmarking engine for travel and expense intelligence. By specializing in the automated integration and precision cleansing of global data, Prime creates a high-fidelity foundation for its platform, Prime Analytics, and external enterprise AI systems. Prime Analytics layers proprietary benchmarking onto unified spend data, empowering companies to move beyond a cost-center mindset to travel as a strategic investment with measurable ROI. Through real-time optimization and automated workflows, Prime transforms fragmented data into a unified, AI-powered engine of corporate growth.

About Agency Technologies
